

Egg lift

Your partner in egg handling solutions
Since 1997

**The egg lift costs less than 10%
when compared to an automatic robot!**

Advantages of an egg lift system:

- no more stacks lifting
- simple and inexpensive
- load 4 stacks at a time
- high capacity: 3 min / pallet
- pallet lift no longer required
- works also with pulp trays
- required height is 2,20 m

Egg lift

Your partner in egg handling solutions
Since 1997

This egg lift makes it possible to place stacks of eggs on pallets with minimum physical effort. This device minimizes therefore complains of physical nature, such as pain in the back or shoulders.

A pallet can be filled within 3 minutes with the use of this manually operated lift. The advantage over an automatic robot is that you keep an overview over the eggs that you stack. Herewith the egg quality is constantly monitored.

This egg lift requires very little space.
10 pallets in succession can be filled without moving even one of them.
No pallet lift required. There are several models available.
